Household Services Application - Project Report

Name - Premshuk Saha
Roll No-23f1000448
Email id- 23f1000448@ds.study.iitm.ac.in

Description of Project

This project aims to build a multi user household services app that links users with trusted, on-demand service professionals across various categories, including home cleaning, repairs, beauty, wellness, and home improvement. Users can easily browse and book services directly in the app and access verified, skilled professionals for convenient, reliable support.

Technologies Used

- Flask: Backend framework for building the web application.
- SQLAlchemy: ORM (Object-Relational Mapping) tool for database interactions.
- SQLite : Database management system for storing application data.
- HTML/CSS: Frontend technologies for user interface design and interactivity.

System Architecture
